	Fax Number	435 752 0507	
	E-Mail Address	edelahoz@bio-west.com	
<b>Project Description / Abstract</b>	<p>In light of the lack of fisheries information in the Bear River Bay/Willard Spur and the potential importance of this fishery for piscivorous birds, the objective of this project is to assess the distribution and relative abundance of fish in this area of GSL. This is critical in order to assess the importance of the fisheries to the bird community supported by the lake. In addition, this study would provide baseline information for the management of GSL, for future monitoring and for the assessment of potential effects of future management activities on GSL aquatic resources.</p>
